

Corporate Overview

BACKGROUND

Panasas is the premier provider of high performance parallel storage solutions for business-critical applications and big data workloads. All Panasas scale-out storage appliances leverage the Panasas® PanFS™ parallel file system to deliver superior performance, data protection, scalability, and manageability.

Panasas introduced initial parallel storage products based on its first generation blade architecture in 2004. Now in its fourth generation, Panasas® ActiveStor™ is optimized for highly demanding HPC storage applications in the bioscience, energy, government, finance, manufacturing, and other core research and development sectors.

Panasas is privately held.

PRODUCTS

Optimized for parallel NFS (pNFS) throughput, ActiveStor scale-out storage appliances scale via a modular, buy-as-you grow blade architecture based on industry standard disk storage and deliver unrivaled performance per gigabyte. This superior product design provides effortless capacity expansion to six petabytes (PB) and linear performance scaling to 150 gigabytes (GB) per second—the industry's highest single file system throughput per terabyte of enterprise SATA storage.

MANAGEMENT

Faye Pairman	President and Chief Executive Officer
Garth Gibson	Founder and Chief Technology Officer
Barbara Murphy	Chief Marketing Officer
Stephanie Vinella	Chief Financial Officer
Bill Ribera	Vice President of Worldwide Sales
Celeste Baranski	Senior Vice President of Engineering
Toya Rico	Vice President of Human Resources
